

Ball Mill

Ball mill is suited for milling various kinds of minerals and other materials. It is the significant equipment used after the crushing.

Ball mill is widely used for cement, silicate products, new building material, fireproof material, chemical fertilizer, ferrous and non-ferrous metal mineral dressing and glass-ceramic areas. Totally, it is used for dry or wet milling for various materials.

The ball mill is made up of feeding part, discharging part, transmission (speed reducing rotor, gear, motor, electric switch box). The hollow shaft is cast steel, the lining can be changed, the reverse gear is designed with casting hobbing, inside the cylinder is the wear-resisting plate.

parameter of ball mill :

model	Rotating speed (r/min)	weight of ball (t)	feeding size (mm)	discharge size (mm)	Capacity (t/h)	power (kW)	Weight (t)
