

## **HP cone crusher**

**HP series cone crusher** is designed by our company based on german latest technology and international advanced technology. It is widely used for metal and nonmetallic mine, cement plant and metallurgy industry etc.

HP series cone crusher improves production capacity and crushing efficiency. Additionally, the cone crusher is widely used from limestone to basalt, from stone production line to mineral crushing. It can complete intermediate crushing, fine crushing and ultra-fine crushing with high efficiency. Additionally, it is easy to maintain. Generally, it is the ideal equipment for large-scale quarry.

high-efficient hydraulic cone crusher is designed on the basis of Germany technology. It had the following characteristics:

1. High-efficiency: the optimized structure like the fixed main principle, small sphere surface bearing bush etc., makes the efficiency increases by 5%-15%.
2. Big capacity: this equipment well matched the crushing stroke and speed. So with the cone of same size, the capacity is Higher than spring cone crusher by 35-60%.
3. Stone of high-quality: the laminating crushing principle makes that most of the final products is of good cubic shape.
4. Stable operation: when there is very hard material in the crushing chamber, the overload protection device will release it automatically.
5. Multiple-point hydraulic lubricating system making sure the double protection of bearing bush and overload protection.

Technical Parameter Of HP Cone Crusher:

Type	Cavity (coarse/fine)	Min. discharge size (mm)	Feed size (mm)	Capacity (t/h)	Power (kW)	Weight (t)	movable cone diameter (mm)
HP-160	C	13	150	120-240	160	13	950
